

Project Deliverable 5 (D5)

Database Presentation

For your 5th and final deliverable, you will give a 10 minute presentation about your database followed by 5 minutes for questions. Your presentation should include information about all steps in your design:

- ERD
 - Design choices
- Table implementation
- Queries
- Normal forms
- Possible users
- Importance of your database
- A very basic webpage containing at least one query.

You will need to upload your presentation via Schoology.

You may use any software for your presentation; however, if you use Prezi, don't go overboard with the effects.

Presentations will go in alphabetical order: Group A, Group B, ..., Group F.
